■ Supplementary document

Sources: Density and materials

Notions of the physics-chemistry program, cycle 4, level 3 (metals, density, alloys, composite materials). Research carried out on 03/11/2026.

- Physics-Chemistry Program, Cycle 4: https://eduscol.education.fr/
To be checked by hand: density (aluminium 2.70; iron 7.87; copper 8.96; lead 11.34; gold 19.32 g/cm³); proportion of New Caledonian nickel used for stainless steel; "one of the world's largest nickel reserves" (common formula).
