■■ Mind map

Convert units without making a mistake

Mixing kilograms and kilometers

Confusion between sizes

Common difficulties Mixing volts and watts

Lack of rigorous method

Proportionality rule

Basic principle

Main operation: Division

Base: 100 cm = 1 m

Convert cm to m

Table Method

Example: 200 cm =2 m

Base: 1000 m = 1 km

Convert m to km

Examples of application

Example: 3000 m = 3 km

Base: 1000 W = 1 kW

Convert W to kW
Example: 4500 W = 4.5 kW
